

Plotting with GeoJSON

Mary van Valkenburg

Data Science Program Manager, Nashville Software School

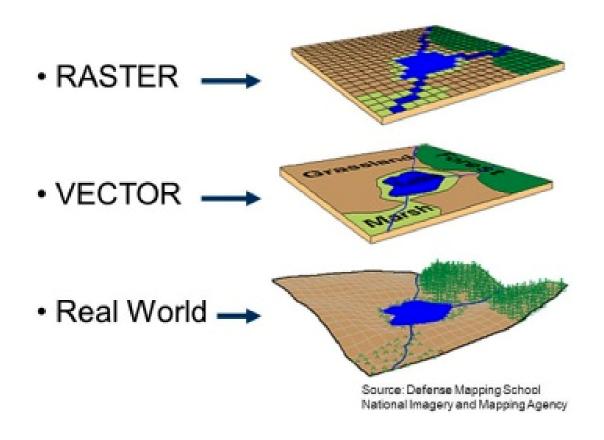

Neighborhoods GeoJSON

```
neighborhoods = gpd.read_file('./data/neighborhood_boundaries.geojson')
neighborhoods.head(1)
```

```
name geometry
Historic Buena Vista (POLYGON ((-86.79511056795417 36.17575964963348)))
```

Geopandas dependencies

- Fiona
 - provides an python API for OGR
- GDAL/OGR
 - GDAL for translating raster data
 - OGR for translating vector data

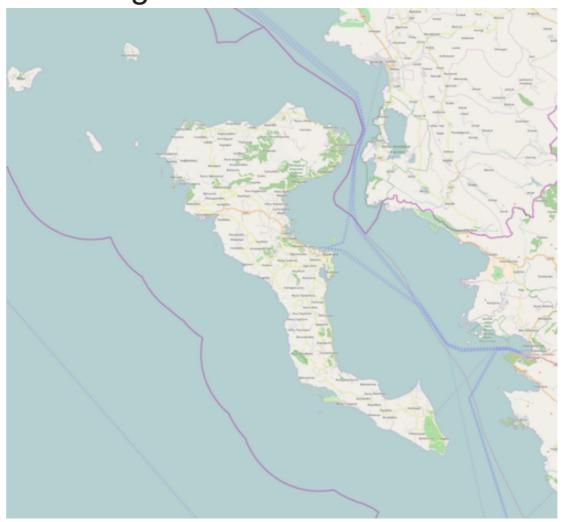

Comparing raster and vector graphics

The legend_kwds argument to .plot()

Let's practice!

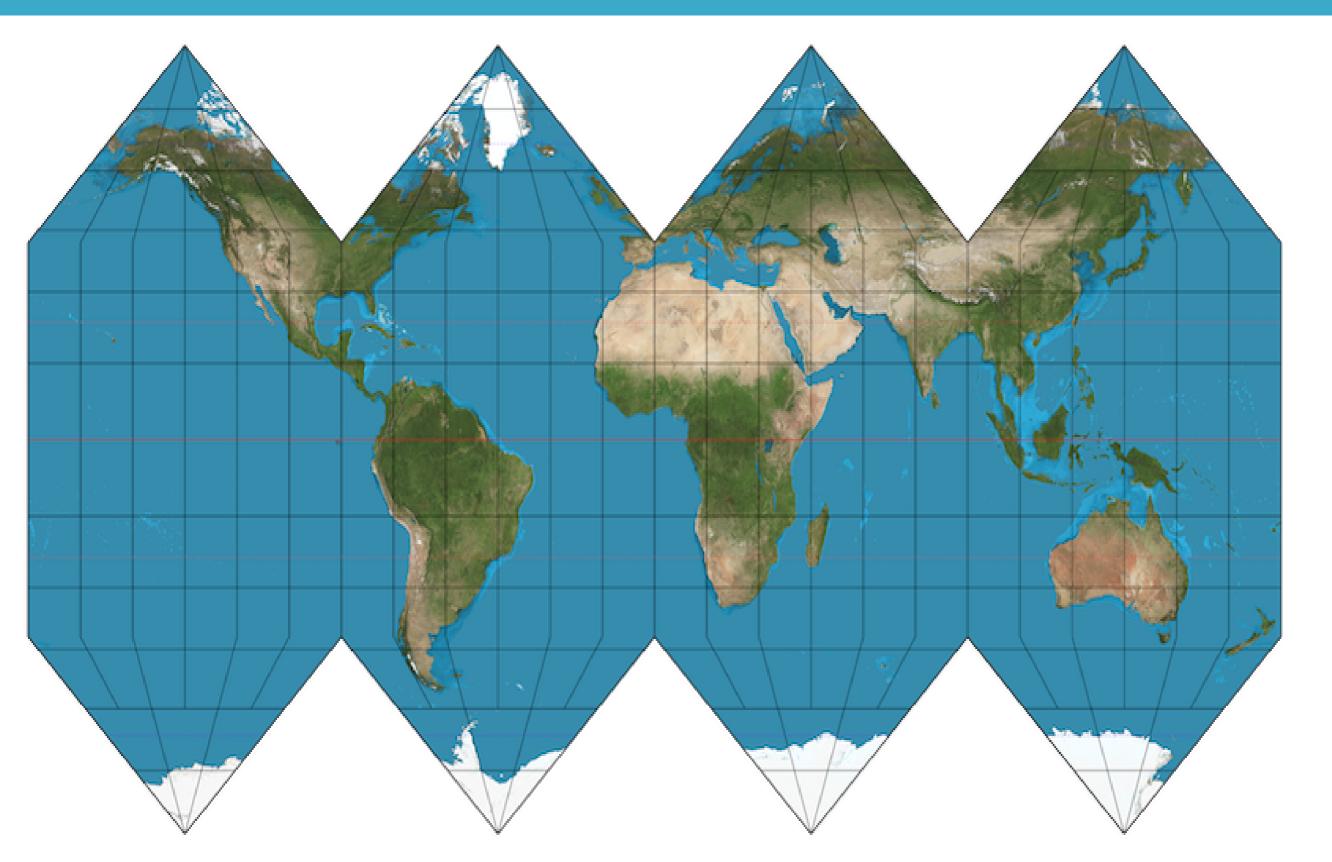

Projections and Coordinate Reference Systems

Mary van Valkenburg

Data Science Program Manager, Nashville Software School

VAN DER GRINTEN

MERCATOR

YOU'RE NOT REALLY INTO MAPS.

YOU HAVE A COMFORTABLE PAIR OF RUNNING SHOES THAT YOU WEAR EVERYWHERE. YOU LIKE COFFEE AND ENJOY THE GEATLES. YOU THINK THE ROBINSON IS THE BEST-LOOKING PROJECTION, HAMPS DOWN.

NATIONAL GEOGRAPHIC ADOPTED THE WINKEL-TRIPEL IN 1998, BUT YOU'VE BEEN A WIT FAN SINCE LOWG BEFORE "NAT GEO" SHOWED UP. YOU'RE WORRIED IT'S GEITING PLAYED OUT, AND ARE THINKING OF SUITCHING TO THE KAYRAYSKIY. YOU ONCE LEFT A PARTY IN DISGUST WHEN A GUEST SHOWED UP WEARING SHOES WITH TOES. YOUR FAVORITE. MUSICAL GENRE. IS "POST-".

YOU'RE NOT A COMPUCATED PERSON. YOU LOVE THE MERCATOR PROJECTION; YOU JUST WISH IT WEREN'T SQUARE. THE EARTH'S NOT A SQUARE, IT'S A CIRCLE. YOU LIKE CIRCLES. TODAY 6 GONNA BE A GOOD DAY!

YOU LIKE ISAAC ASIMOV, XML, AND SHOES WITH TOES, YOUTHINK THE SEGWAY GOT A BAD RAP. YOU OWN 3D GOGGLES, WHICH YOU USE TO VIEW ROTATING MODELS OF BETTER 3D GOGGLES. YOU TYPE IN DWRAK.

THEY SAY MAPPING THE EARTH ON A 2D SURFACE IS LIKE FLATTENING AN ORANGE PEEL, WHICH SEEMS EASY ENOUGH TO YOU. YOU LIKE EASY SOLUTIONS. YOU THINK WE WOULDN'T HAVE SO MANY PROBLEMS IF WE'D JUST ELECT MORMAY PEOPLE TO CONGRESS INSTEAD OF POLITICIANS. YOU THINK AIRLINES SHOULD JUST BUY ROOD FROM THE RESTAURANTS NEAR THE GATES AND SERVE THAT ON BOARD. YOU CHANGE YOUR CAR'S OIL, BUT SECRETLY WONDER IF YOU REALLY NEED TO.

YOU WANT TO AVOID CULTURAL IMPERIALISM, BUT YOU'VE HEARD BAD THINGS ABOUT GALL-PETERS. YOU'RE (CARUCT-AVERSE AND BUY ORGANC. YOU USE A RECENTLY-INVENTED SET OF GEOPER-NEUTRAL PRONOUNS AND THINK THAT WHAT THE WORLD NEEDS IS A REVOLUTION IN CONSCIOUSNESS.

PEIRCE QUINCUNCIAL

YOU THINK THAT WHEN WE LOOK AT A MAR, WHAT WE REALLY SEE IS OVERSELVES. AFTER YOU FIRST SAW INCEPTION, YOU SAT SILENT IN THE THEMER FOR SIX HOURS, IT FREAKS YOU OUT TO REALIZE THAT EVERYONE AROUND YOU HAS A SKELETON INSIDE THEM, YOU HAVE REALLY LOOKED AT YOUR HANDS.

YOUTHINK THIS ONE IS FINE. YOU LIKE HOW X AND Y
MAP TO LATITUDE AND LONGITUDE. THE OTHER
PROJECTIONS OVERCOMPLICATE THINGS. YOU WANT HE
TO STOP ASKING ABOUT MAPS SOYOU CAN EXIDY DINNER.

WATERMAN BUTTERFLY

REALLY? YOU KNOW THE WATERMAN? HAVEYOU SEEN THE 1909 CAHILL MAP IT'S BASED — ... YOU HAVE A FRAMED REPRODUCTION AT HOME?! WHOA. ... USTEN, FORGET THESE QUESTIONS. AREYOU DOING ANYTHING TONIGHT?

GALL-PETERS

I HATE YOU.

Coordinate Reference Systems

EPSG:4326

- used by Google Earth
- units are decimal degrees

EPSG:3857

- used by Google Maps, Bing Maps, Open Street Maps
- units are meters

Creating a geometry column

```
School Name

A. Z. Kelley Elementary 36.021 -86.658

Alex Green Elementary 36.252 -86.832

Amqui Elementary 36.273 -86.703

Andrew Jackson Elementary 36.231 -86.623
```

```
# create a point geometry column
from shapely.geometry import Point

schools['geometry'] = schools.apply(
    lambda x: Point((x.Longitude, x.Latitude)),
    axis = 1)

schools.head()
```

```
School Name
                        Latitude
                                     Longitude
                                                  geometry
A. Z. Kelley Elementary
                        36.021
                                  -86.658
                                               POINT (-86.658 36.021)
Alex Green Elementary 36.252
                                  -86.832
                                               POINT (-86.832 36.252)
Amqui Elementary
                  36.273
                                  -86.703
                                               POINT (-86.703 36.273)
Andrew Jackson Elementary 36.231
                                  -86.623
                                               POINT (-86.623 36.231)
```

Creating a GeoDataFrame from a DataFrame

```
schools_geo.head(4)
```

```
      School Name
      Latitude
      Longitude
      geometry

      A. Z. Kelley Elementary
      36.021
      -86.658
      POINT (-86.658 36.021)

      Alex Green Elementary
      36.252
      -86.832
      POINT (-86.832 36.252)

      Amqui Elementary
      36.273
      -86.703
      POINT (-86.703 36.273)

      Andrew Jackson Elementary
      36.231
      -86.623
      POINT (-86.623 36.231)
```

schools geo.head(2)

Changing from one CRS to another

```
      School Name
      Latitude
      Longitude
      geometry

      A. Z. Kelley Elementary
      36.021
      -86.658
      POINT (-9646818.8 4303623.8)

      Alex Green Elementary
      36.252
      -86.832
      POINT (-9666119.5 4335484.4)
```

Let's practice!

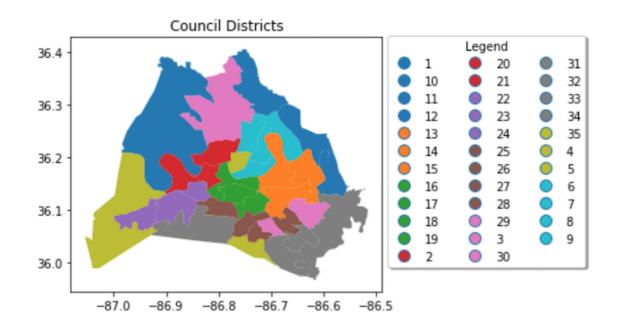

Spatial joins

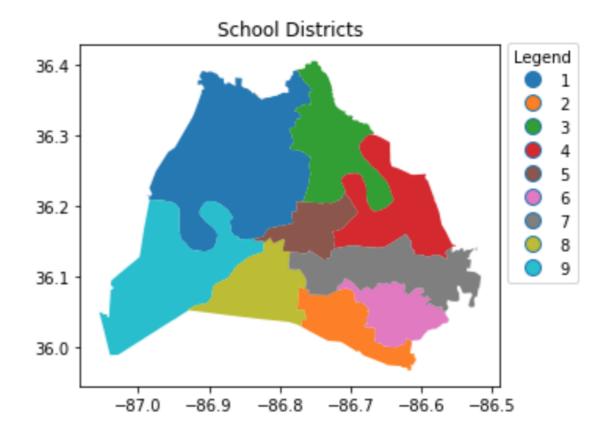

Mary van Valkenburg

Data Science Program Manager, Nashville Software School

Council districts and school districts

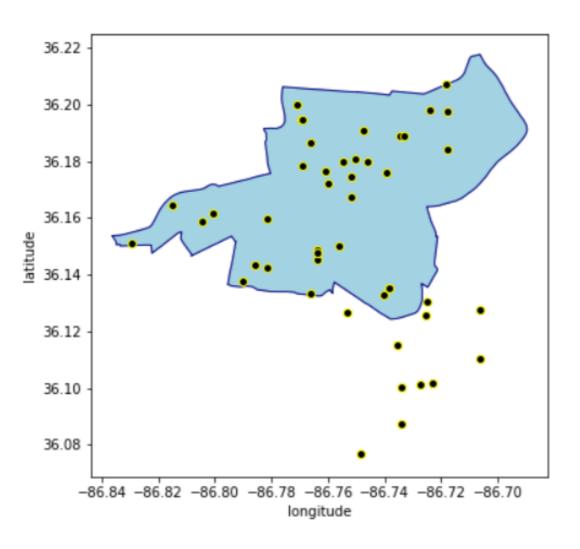

The .sjoin() op argument

```
import geopandas as gpd
gpd.sjoin(blue_region_gdf, black_point_gdf, op = <operation>)
```

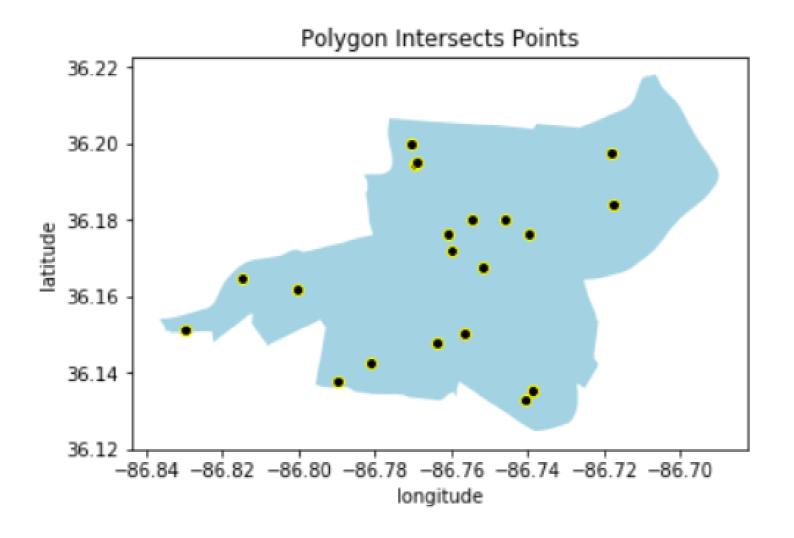

operation can be *intersects*, *contains*, or *within*

Using .sjoin()

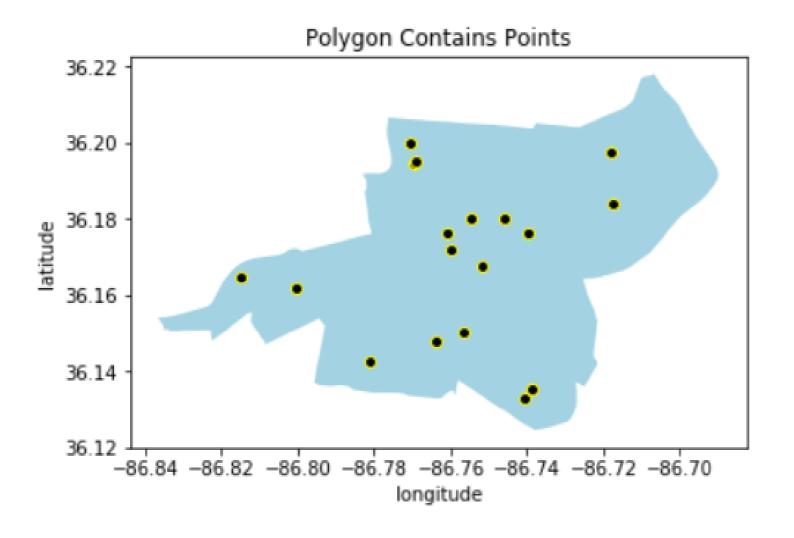

op = 'intersects'

gpd.sjoin(blue_region_gdf, black_point_gdf, op = 'intersects')

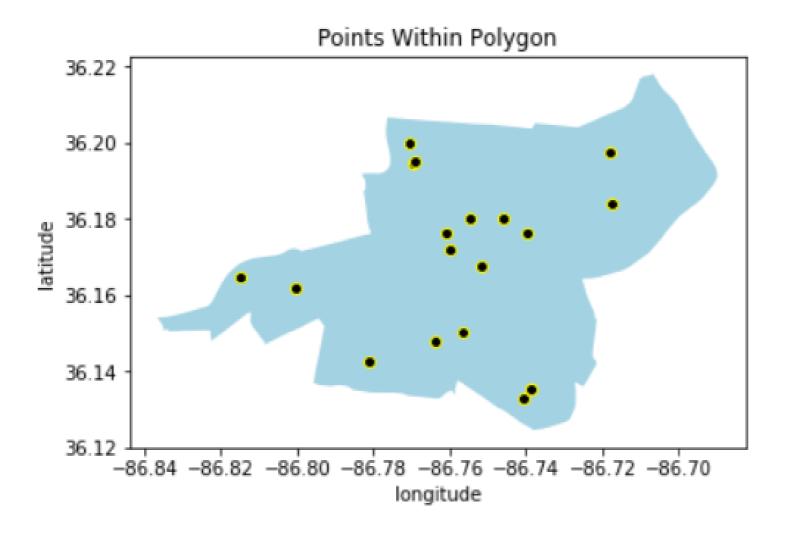

op = 'contains'

gpd.sjoin(blue_region_gdf, black_point_gdf, op = 'contains')

op = 'within'

gpd.sjoin(black_point_gdf, blue_region_gdf, op = 'within')

The sjoin.() op argument - within

council districts within school districts: 11

```
# find council districts within school districts
within_gdf =gpd.sjoin(council_districts, school_districts, op='within')
print('council districts within school districts: ', within_gdf.shape[0])
```

The sjoin.() op argument - contains

```
# find school districts that contain council districts
contains_gdf=pd.sjoin(school_districts, council_districts, op='contains')
print('school districts contain council districts: ', contains_gdf.shape[0])
school districts contain council districts: 11
```

The sjoin.() op argument - intersects

council districts intersect school districts: 100

```
# find council districts that intersect with school districts
intersect_gdf=gpd.sjoin(council_districts, school_districts, op='intersects')
print('council districts intersect school districts: ', intersect.shape[0])
```

Columns in a spatially joined GeoDataFrame

```
within_gdf=gpd.sjoin(council_districts, school_districts, op = 'within')
within_gdf.head()
```

```
first_name_left last_name_left district_left index_right

0 Nick Leonardo 1 0

1 DeCosta Hastings 2 0

2 Nancy VanReece 8 1

3 Bill Pridemore 9 1

9 Doug Pardue 10 1
```

Aggregating spatially joined data

Let's Practice!
